

MATIAS PERRONE

Proactive developer, passionate about VueJS, ReactJS and Javascript. My first love was PHP! (I still love it)

Mobile:
Email:

SUMMARY

I've been a developer since 1998 and a full stack web developer since 2004, I have 21 years of experience, as a Functional Analyst but also as a developer with PHP (21+ yrs), Javascript (21+ yrs), NodeJS (5+ yrs), VueJS (5+ yrs), ReactJS (4+ yrs), I have a college degree in System Analysis.

I have worked in many industries and many different companies with its peculiarities, I'm an active listener so I can offer the best solution for your particular needs and objectives.

I truly love development. I get excited every time my favorite languages and tools release a new feature. I love to learn new things, so sometimes go on and on talking about development all day with my dev friends.

In 2012 I co-founded a startup called aluGuest (it was operative until 2017), a platform for temporary accommodation rental. I build the architecture for aluGuest from zero, I was able to gather a small but solid web development and design team to solve our needs, at the time there was no React, no Vue or even Node yet, or they were in very early stages (beta versions or prior), so I build a solid platform using jQuery, PHP, MySQL and MongoDB, it was fast and bullet proof, we process credit cards and handle money, we didn't have any security breach and the code was robust.

Later in 2017 I learned VueJS, I was part of several projects using it, a very large one for the Argentina government (a Transportation Agency), and other private held companies in the most diverse applications, also rebuild my ex partner's (from aluGuest) company ecommerce platform (a small temp apartment rental agency in Buenos Aires) Welcome2BA, using NuxtJS (a VueJS framework) and PHP 7.

In the latest years I worked with ReactJS, NextJS and some minor VueJS projects. I also worked in backend creating APIs and batch applications in NodeJS and PHP.

I have more to share, so I hope we can meet soon.

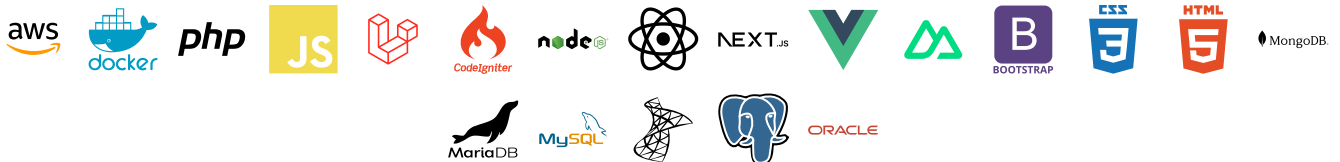

EDUCATION

Systems Analyst - UTN - National Technology University

1997 - 2005

Buenos Aires, Argentina

TECHNOLOGIES

AWS, Docker, PHP, Javascript, Laravel, CodeIgniter, NodeJS, ReactJS, NextJS, VueJS, NuxtJS, Bootstrap, CSS, HTML5, MongoDB, MariaDB, MySQL, SQL Server, PostgreSQL, Oracle

WORK EXPERIENCE

Command | Link - USA - Full Stack Senior Developer

May 2024 - Current

Techs: ReactJS, PHP 8.4, PHP 8.3, Yii, Laravel, Docker, MySQL Server (Azure Max Scale), MS SQL Server (Azure).

As a Senior Developer I developed new internal APIs using Laravel and new UI interfaces using ReactJS, I had to connect to different DB vendors like MySQL and SQL Server, and third party APIs to consume information relative to the business.

I participate in some architecture definitions and proposed ideas for change and improvement.

I work alongside QA to bring quality and velocity when new features are ready to be tested.

I also work well in messy legacy environments with little or no documentation is available.

Globant - Argentina | Kingdom of Saudi Arabia - Senior Web UI Developer

Jan 2024 - May 2024: 5 months

Techs: Shopify, Liquid, Vanilla Javascript, HTML, jQuery, CSS.

As a Senior Web UI Developer I resolved a lot of performance issues and development issues.

I manage to set the time down from 16 seconds loading time to 1.5 seconds, and teach others to follow performance guidelines.

I became part of kayanee.com project from KSA to bring performance improvements and share knowledge of how to develop vanilla javascript.

I participated as keynote speaker in a Javascript development seminar about performance improvements for young developers.

Pest Share - USA - Full Stack Developer

March 2023 - September 2023: 6 months

Techs: NextJS, ReactJS, PHP 7.4, PHP 8.2, CodeIgniter, Laravel, Docker, MySQL Server (AWS RDS), AWS (S3 and EC2).

As the main developer of the "Claim Management" project, I was able to convince the leaders to change the project tech stack from JQuery as initially was requested to a ReactJS version, particularly a NextJS version.

I also introduced Laravel along with a backend team member for the API, and at the same time keep the legacy code working as needed.

This project allows a customer to request a pest control service and, at the same time, to the Pest Share operations team handle such service removing the current manual process.

In my time in Pest Share I've:

- Created the integration code to submit a pest control request from any web page.
- Move part of the project to ReactJS and into a new way of doing software.
- Fixed bugs in the legacy code.
- Integrated the legacy code with the new ReactJS code.
- Solved various DB issues in the legacy code.
- Solved the database synchronization between old and new tables.

Pest Share is a startup company their goal is to "Remove the confusion and frustration around property manager pest control. Residents report pest problems and local service providers take care of the rest."

Mahisoft - USA - Full Stack Developer

November 2021 - January 2023: 1 year, 2 months

Customer: BidMyListing.com

Techs: NodeJS, ReactJS, MongoDB, Jest.

As part of the team I had to implement the features requested by the business on the frontend side.

I was with the team since started, prior the production version, building the foundation of the first versions of the platform and always improving ever since.

BidMyListing is startup company, focused on real estate as a marketplace platform that allows homeowners to choose the best real estate agents in their area who will pay them upfront to list their home.

We were a dynamic team of very skilled developers, who keep you learning all the time, pushing to the best of your ability, I was very happy to be part of it!

Willdom - USA - Full Stack Developer

March 2021 - November 2021: 9 months

Customer: LaCure Villas

Techs: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

My objective in LaCure Villas was to stabilize the old system, that have been suffering a lot of bug issues and crashes, so the business can still work and then start design and develop a new system.

The new system should be handling the calendar synchronization across different providers and connect to several external providers' API's and, at the same time, improve the response time and reduce the downtime of the internal process, providing, in the future, the possibility of online payments, connection with the ERP, and the CRM and a lot of new features that the business needed.

LaCure Villas is a luxury temporary rental agency for the more exclusive and demanding customers. We were a small team of 3 developers and a manager.

Wortise - Argentina / Uruguay - Lead Developer

May 2020 - January 2021: 9 months

Techs: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

Databases: MongoDB, MySQL, PostgreSQL, ElasticSearch, BigQuery.

In Wortise, which is a very young company with a dynamic spirit, I work in the development area, carrying out analysis, participating a lot, contributing my grain of sand and sharing with great minds a job that fills me a lot, I feel a belonging that I do not I felt before and the team's push allows me and asks me to give my best.

In particular, I carry out internal business support software development, changes within the AdServer core and also completely innovative, ambitious and disruptive projects.

Global Innovation - Argentina, USA, etc. - Developer and founder

Feb. 2017 - May 2020: 3 years and 4 months

Techs: NodeJS, VueJS, PHP, C#.

Databases: PostgreSQL, MongoDB, MySQL, Oracle, SQL Server.

This is my personal brand as developer.

In my daily dealings with clients, I make custom requirements, and estimate project scope for trade budget, scope, negotiate the dates of payments and deliverables for each milestone.

Once approved the budget, I make a deeper analysis, which is discussed later with the client, making the necessary adjustments before the technical and functional design. In general, projects are focused on web environments and web services depending on needs.

Global Innovation - Senior Lead Software Engineer

Feb. 2017 - Jan. 2019: 2 years

Customers: Baires Apartments and Welcome2BA

Techs: PHP 5.6 and 7, CodeIgniter, CakePHP, jQuery, Javascript, SQL Server, MariaDB, NuxtJS (VueJS), MongoDB.

BAires Apartments partnered with Welcome2BA in order to become more profitable and, together be, the biggest player on Temporary Rentals in Buenos Aires.

My main goal: migration of systems, process integration, change the process and systems smoothly in order to do what each one does better and improve the others.

Integration with third parties software, like ZenDesk, Slack, Zoho CRM, Cliengo, aluPays.

My main goal: migration of systems, process integration, smoothly changes in the process and systems to do what each do better and improve each other processes and systems.

aluGuest.com - Founder, CTO and Senior Developer

Apr. 2012 - Jan. 2017: 4 years and 10 months

Techs: PHP 5.6, PHP 7, CodeIgniter, CakePHP, jQuery, Javascript, MariaDB, MongoDB, ReactJS 1.

aluGuest.com was a platform for temporary accommodation rental focused in the latinamerican market.

We have integrations with large credit card processing providers like Braintree and PayPal and we had to create our own credit card processing company with its own API and integration, we called it aluPays.

It was a big challenge create everything from zero and one of the greatest moments in my career, I've lead a team of designers, developers, I also oversee operations, and managed budgets.
