SUMMARY

Experienced Full Stack Developer Architecting Scalable Solutions

With over **20 years** of experience in software development, I have built and led innovative web applications across multiple industries, including **SaaS, ecommerce, real estate, telecommunications, and temporary accommodation rental**. My expertise spans **frontend and backend development**, software architecture, and leadership roles such as team lead, project manager, and founder.

I specialize in **PHP, NodeJS, ReactJS, NextJS, VueJS, NuxtJS**, and database management with **MySQL, PostgreSQL, MongoDB, MariaDB, SQL Server, and Oracle**. I also have **deep expertise** in cloud computing (**AWS, Docker**) and system scalability.

Holding a **college degree in System Analysis**, I thrive in **fast-paced environments**, solving complex technical challenges, optimizing performance, and mentoring teams to deliver high-impact solutions.

EDUCATION

Systems Analyst - UTN - National Technology University

From: 1997 - 2005

Buenos Aires, Argentina

TECHNOLOGIES

AWS, Docker, Javascript, Typescript, NodeJS, ReactJS, NextJS, VueJS, NuxtJS, CSS, HTML5, PHP, Laravel, CodeIgniter, MongoDB, MariaDB, MySQL, SQL Server, PostgreSQL, Oracle

WORK EXPERIENCE

Global Innovation - Argentina, USA, Mexico and others - Senior Full Stack Developer / Contractor / Freelancer

From: May 2007 - To: Present

Techs: Typescript, ReactJS, NextJS, VueJS, PHP, NodeJS, Laravel, Docker

Databases: PostgreSQL, MongoDB, MySQL, Oracle, SQL Server.

Clients needed clear project scope, realistic budgets, and defined milestones before technical work could begin, often with evolving requirements.

I gather custom requirements directly with each client, estimate project scope, and negotiate budgets, payment schedules, and deliverables for every milestone.

Once the budget is approved, I run a deeper technical and functional analysis, refining scope together with the client before design work begins.

I deliver web environments and web services tailored to each client's needs, aligning technical design with business goals, which reduces scope misalignment and rework by front loading analysis and negotiation before development starts.

Some of the main clients:

- Welcome2BA.com: Platform development from the ground up, Slack, Calendars Sync, Online Payments, agency management. Customized PHP CodeIgniter and jQuery, later Nuxt/Vue and PHP/Laravel.
 - BairesApartments.com: Merged with welcome2ba.com, system migration toward the Welcome2BA platform.
 - Fanyion.com: Startup, SaaS multi tenant platform created from the ground up, PHP Laravel API and Next frontend UI.
-

Exomindset - USA - Senior Full Stack Developer

From: August 2025 - To: June 2026

Clients:: OpenInfra Foundation (OpenStack) and FNTech

Technologies Used: ReactJS, Gatsby, PHP, Laravel, NodeJS, Docker, Decap CMS, Python, Django, OpenAPI, Open Telemetry

Migration of open source and private source code projects:

- Migrated legacy SilverStripe (PHP) pages to Gatsby (ReactJS), improving performance and maintainability through a decoupled JAMstack architecture.
- Integrated Decap CMS (formerly Netlify CMS) to preserve a familiar content editing workflow after the migration.
- Built standalone Gatsby microsites to support targeted initiatives without adding overhead to the core codebase.
- Reverse engineered and documented over 1200 undocumented API endpoints across Laravel (PHP) and Django (Python) services.
- Implemented OpenAPI (formerly Swagger) specifications for both APIs, creating a single source of truth that cut developer onboarding time and removed integration guesswork.
- Implemented Open Telemetry in the Laravel (PHP) APIs.
- Implemented Open Telemetry in the Django (Python) APIs.

Command Link - USA - Senior Full Stack Developer

From: May 2024 - To: May 2025

Technologies Used: Typescript, ReactJS, PHP 8.X, Yii, Laravel, Docker, MySQL Server (Azure Max Scale), MS SQL Server (Azure).

- SaaS multi tenant platform for network management and monitoring, with a complex architecture and several microservices.
 - Modernized the legacy platform by embedding React applications, improving performance without a full rewrite.
 - Built the integration layer connecting React and legacy applications so they work seamlessly together.
 - Designed and developed APIs enabling async communication across company systems, reducing tight coupling and improving resilience.
 - Scaffolded a new React development repository and multiple PHP Laravel API repositories, standardizing project setup and speeding up future development.
-

Globant - Argentina - Senior Web UI Developer

From: January 2024 - To: May 2024

Client - Kingdom of Saudi Arabia: Kayanee.com

Technologies Used: Shopify, Liquid, Vanilla Javascript, HTML, jQuery, CSS.

- **Shopify** project
- Performance enhancement **from 16s to 0.8s load time** to user interaction.
- Change Javascript code to enhance and improve performance to avoid locking times.
- Home page video loading **from 24s to <1s** using advanced streaming techniques.
- Detect bottle necks on code to optimize.
- Keynote speaker in a performance seminar for junior developers.

Pest Share - USA - Senior Full Stack Developer

From: March 2023 - To: September 2023

Technologies Used: NextJS, ReactJS, PHP, Laravel, CodeIgniter, Docker, MySQL Server (AWS RDS), AWS (S3 and EC2).

In my 6 months project in Pest Share I have:

- Created the integration code to submit pest control requests from any web page.
- Moved part of the project to ReactJS and into a new way of doing software.
- Fixed bugs in the legacy code.
- Integrated the legacy code with the new ReactJS code.
- Solved various DB issues in the legacy code.
- Solved the database synchronization between old and new tables.

I convinced the leaders to change the project tech stack from jQuery, as initially requested, to a ReactJS version, specifically NextJS. I also introduced Laravel for the API together with a backend team member, while keeping the legacy code in CodeIgniter working as needed.

I built the Claim Management module, a way for customers to request a pest control service and for Pest Share operations to handle it, removing the previous manual process.

Mahisoft - USA - Senior Full Stack Developer

From: November 2021 - To: January 2023

Startup Client: BidMyListing.com

Technologies Used: Typescript, NodeJS, ReactJS, NextJS, Docker

- Real Estate SaaS marketplace platform, built from the ground up as a founding engineer, with no existing codebase or established patterns to follow.
- Built frontend features in ReactJS, translating InVision designs into pixel accurate pages and components.
- Contributed to backend development using NodeJS, with and without TypeScript, for API endpoints as needed.
- Improved maintainability by using TypeScript in the API.
- Participated in the full Scrum process, including daily standups, sprint planning, grooming, and retrospectives, estimating and discussing story points with the team.

Willdom - USA - Senior Full Stack Developer

From: March 2021 - To: November 2021

Client: Lacure Villas, temporary rental agency for luxury villas

Technologies Used: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

In my time working with Lacure Villas I have:

- Stabilized the unstable legacy system (Vue and old Laravel API), which put business continuity at risk, keeping the business running while leading the design and development of its successor.
 - Built a calendar synchronization service across multiple external providers using PHP Laravel.
 - Improved response times and reduced downtime of internal processes, adding support for online payments.
 - Managed integrations connecting external sources with the company's ERP and CRM (Zoho) simultaneously.
-

Wortise - Argentina / Uruguay - Lead Developer

From: May 2020 - **To:** January 2021

Techs: NodeJS, VueJS, PHP

Databases: MongoDB, MySQL, PostgreSQL, ElasticSearch, BigQuery.

- An ad industry company needed to scale to a massive sales and invoicing architecture while facing performance bottlenecks across core systems.
- Identified and fixed bottlenecks across the AdServer core and internal business support software to support massive scale.
- Improved the sales and invoicing architecture performance, enabling the company to handle massive scale reliably.
- Contributed to innovative and disruptive projects leveraging Big Data for future Ad industry approaches.

aluGuest.com - Co-Founder, CTO and Senior Developer

From: April 2012 - **To:** January 2017

Technologies Used: PHP, Laravel, CodeIgniter, CakePHP, jQuery, Javascript, MariaDB, MongoDB, ReactJS

1

- The Latin American market lacked a dedicated temporary accommodation rental platform, and existing payment processors limited control over the payment flow.
- Built aluGuest from the ground up as a greenfield platform, integrating Braintree and PayPal for credit card processing.
- Designed and built aluPays, a proprietary credit card processing solution with its own API, reducing dependency on third party processors.
- Led a team of designers and developers while overseeing operations and managing budgets.
- Delivered a fully functioning platform with its own payment infrastructure, giving the company greater control and flexibility over transactions.
