

MATIAS PERRONE

Full Stack Developer, Javascript, PHP and VueJS lover.

PROFILE

My experience goes from designing and develop a system from scratch, documenting the initial requirements to the training courses, and the design of technical and user manuals for a wide variety of methods with different characteristics.

I am a "fan" of teamwork, and I consider myself self-taught. My innovative and proactive approach has always been beneficial facing challenges that appeared throughout my career. Many of the technologies I use, I have learned them in a self-taught way, based on knowledge acquired at the National Technological University.

WORK EXPERIENCE

Pest Share – Full Stack Developer
November 2021 – January 2023: 1 year, 2 months
Directly: pestshare.com

Pest Share is a startup company their goal is to "Remove the confusion and frustration around property manager pest control. Residents report pest problems and local service providers take care of the rest."

We were in charge of develop the product to integrate, operation management with property managers integration and service providers work.

In my time in Pest Share I've created:

- The integration code to submit pest control request from anywhere.
- Move part of the project to ReactJS and into a new way of doing software.
- Fix bugs on legacy code
- Integrate old legacy code with the new ReactJS code.
- Solve various DB issues on the legacy code.

Techs: NextJS, ReactJS, PHP7.4, PHP 8.2, Laravel, Docker, MySQL Server, AWS (S3 and EC2).

WORK EXPERIENCE

Mahisoft – Full Stack Developer

November 2021 – January 2023: 1 year, 2 months

Customer: **BidMyListing.com**

As a Mahisoft web developer, I worked at BidMyListing.com as a Fullstack developer.

BidMyListing is startup company, focused on real estate as a marketplace platform that allows homeowners to choose the best real estate agents in their area who will pay them upfront to list their home.

My main task is to implement the features requested by business on the frontend side. I have been with the team since started and prior production site building the foundation of the first versions of the platform and always improving since.

We are a dynamic team of very skilled developers, who keep you learning all the time, pushing to the best of your ability, I am happy to be part of it!

Techs: NodeJS, ReactJS, MongoDB, Jest.

LaCure Villas – Full Stack Developer

March 2021 – November 2021: 9 months

LaCure Villas is a luxury temporary rental agency for the more exclusive and demanding customers.

My objective in LaCure is to stabilize the old system, so the business can still work and then start design and develop a new system.

The new system must handle the calendar synchronization across different providers and connect with several external sources and at the same time improve the response time and reduce the downtime of the internal process, provide with the possibility of online payments, connection with the ERP, and the CRM and a lot of new features that the business needs.

I work with a team of developers that help on this task.

Techs: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

Wortise – Lead Developer

May 2020 – Jan 2021: 9 months

This is a young startup with a dynamic spirit. I worked in the development area, carrying out analysis, internal business support software development, changes within the Ad Server core and completely innovative, ambitious, and disruptive projects.

Techs: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

Global Innovation – Developer and founder

Feb. 2017 – May 2020: 3 years and 4 months

This is my personal brand as developer.

In my daily dealings with clients, I make custom requirements, and estimate project scope for trade budget, scope, negotiate the dates of payments and deliverables for each milestone.

Once approved the budget, I make a deeper analysis, which is discussed later with the client, making the necessary adjustments before the technical and functional design. In general, projects are focused on web environments and web services depending on needs.

Techs: NodeJS, VueJS, PHP, C#, PostgreSQL, MongoDB, MySQL, Oracle, SQL Server.

aluGuest.com – Founder, CTO and Senior Developer

Apr. 2012 – Jan. 2017: 4 years and 10 months

Lead teams of designers, developers, oversee operations, manage budgets. It was a big challenge and one of the greatest moments in my carrier.

Techs: PHP 7, CodeIgniter, CakePHP, jQuery, Javascript, MariaDB, ReactJS.

Baires Apartments and Welcome2BA - Senior Lead Software Engineer

Feb. 2017 – Jan. 2019: 2 years

My main goal: migration of systems, process integration, smoothly changes in the process and systems to do what each do better and improve each other processes and systems.

Techs: PHP, SQL Server, jQuery, Javascript.

Movistar – Functional Analyst

Dec. 2010 – Apr. 2012: 1 year and 5 months

My task were the Project Management and Functional Analysis, as a link between business analysts and the software factory in addition to managing the setup of the environments for new applications and interact with other areas such as Production Management, Information Security and Application Architecture to reach the best possible solution, both technically and functionally.

The area is focused to everything involving applications for client's self-management, such as www.movistar.com.ar, www.tiendamovistar.com.ar, online.movistar.com.ar (Self-management for individuals), portal-empresas.movistar.com.ar (Self-management for Companies and Organizations) and several others for internal customer management.

The company allowed me to grow professionally by finding more formal ways and procedures.

Global Innovation – Functional Analyst / Commercial

May 2007 – Dec. 2010: 3 years and 8 months

In my daily dealings with clients, I make custom requirements, and estimate project scope for trade budget, scope, negotiate the dates of payments and deliverables for each milestone.
